

Partner Workshop Management and Booking Workflow

1. Partner Registration

Add functionality on the /partners page so users can register as partners of the site.

When a partner registers:

- Create a partner account/profile.
- Send an email notification to the partner confirming registration.
- Send an email notification to the site admin about the new partner registration.

2. Partner Dashboard

After registering, partners should have access to a dashboard where they can manage workshops.

Partners should be able to:

- Add new workshops.
- Add multiple workshops, subject to the maximum workshop limit configured for that partner.
- Edit existing workshops.
- Suspend workshops.
- View workshop performance metrics.

3. Partner Workshop Limit

There should be a maximum number of workshops that can be created by each partner.

- Set the default maximum workshop limit to 3 workshops per partner for the moment.
- Site admins should be able to update the maximum workshop limit for each partner from the admin dashboard.
- Partners should not be able to create more workshops than their assigned limit.
- If a partner reaches their workshop limit, show a clear message in the partner dashboard.

4. Workshop Creation

When creating a workshop, partners should be able to define:

- Workshop details such as title, description, location, category, price, duration, language, images, and any other required fields.
- Available dates.
- Time slots for each date.
- Booking capacity/count for each time slot.

Each workshop can have multiple dates and multiple time slots.

5. Workshop Review Workflow

When a partner submits a workshop, its status should be set to pending.

Site admins should be able to review submitted workshops from the admin panel.

Admins should be able to:

- Approve a workshop.
- Reject a workshop.
- Add a rejection reason/comment when rejecting a workshop.

Workshop statuses should include at least:

- pending
- approved
- rejected
- suspended

When a workshop is approved, it should become visible on the /experience page.

When a workshop is rejected, the partner should be able to view the rejection reason/comment.

Send an email notification to the partner whenever the workshop status changes.

6. Workshop Editing Workflow

Partners should be able to edit their workshops.

When an approved or rejected workshop is edited and submitted again:

- Change the workshop status back to pending.
- Require site admin review and approval again before it appears on /experience.

Suspended workshops should not be visible on /experience.

7. Experience Page Filtering and Sorting

On the /experience page, users should be able to filter and sort approved workshops.

Users should be able to filter workshops by:

- Location
- Category
- Price
- Duration
- Language

Users should be able to sort workshop results by:

- Popularity
- Price
- Rating

Filters and sorting should work together and should only show approved and active workshops.

8. Workshop Booking Flow

Users should be able to book approved workshops from the /experience page.

The booking flow should allow users to:

- Select a workshop.
- Select an available date.
- Select an available time slot.
- Fill in user details, similar to the current booking implementation.
- Submit the booking.

Users should only be able to book a time slot if booking capacity is available.

After the user submits a booking:

- Create a booking record.
- Set booking status to pending.
- Reduce the available booking count for the selected time slot.
- Send an email notification to the workshop partner.
- Send an email notification to the user confirming the booking submission.

9. Partner Booking Management

Workshop partners should be able to view bookings for their workshops in their dashboard.

Partners should be able to:

- Confirm a booking.
- Cancel a booking.

Booking statuses should include at least:

- pending
- confirmed
- cancelled

When a booking is cancelled:

- Increase the available booking count for the related time slot.

When a booking status changes:

- Send an email notification to the user.

10. Availability Rules

Booking availability should be calculated per workshop date and time slot.

- Each time slot must have its own booking capacity.
- A user should not be able to book a time slot if the available count is zero.
- The system should prevent overbooking, including cases where multiple users try to book the same slot at the same time.

11. Workshop Ratings and Reviews

Users should be able to rate and review workshops.

- Users must be logged in before they can submit a rating or review.
- After a user submits a review, the review status should be set to pending.
- Workshop partners should be able to review submitted reviews for their own workshops.
- Workshop partners should be able to publish or reject a review.
- Send an email notification to the workshop partner when a new review is submitted.
- When a review is published by the partner, send an email notification to the user informing them that their review has been published.
- Rejected reviews should not be visible publicly.
- Published reviews should contribute to the workshop rating shown on the /experience page.

Review statuses should include at least:

- pending
- published
- rejected

12. Partner Workshop Performance Dashboard

Partners should be able to view performance metrics for their workshops from their dashboard.

The performance dashboard should show metrics such as:

- Total workshops created.
- Total approved workshops.
- Total pending workshops.
- Total rejected workshops.
- Total suspended workshops.
- Total bookings per workshop.
- Total pending bookings.
- Total confirmed bookings.
- Total cancelled bookings.
- Available vs booked count per date and time slot.

- Revenue or estimated revenue per workshop, if pricing is available.
- Most booked workshops.
- Popular workshops based on bookings and ratings.
- Average rating per workshop.
- Upcoming bookings.
- Recent booking and review activity.

Partners should only be able to view performance data for their own workshops.

Admins may also have access to overall workshop performance across all partners, if required.

13. Email Notifications

Implement email notifications for the following scenarios:

1. Partner registration - send to partner and site admin.
2. Workshop status change - send to partner.
3. User submits a booking - send to workshop partner and user.
4. Booking status change - send to user.
5. Review submitted - send to workshop partner.
6. Review published - send to the review user.

14. Admin Requirements

Admins should be able to:

- View pending workshop submissions.
- Review workshop details.
- Approve workshops.
- Reject workshops with a required rejection reason/comment.
- View workshop status history if applicable.
- View and update the maximum workshop limit for each partner.
- View partner details and workshop counts.

15. Data Model Suggestions

Add or update database models/tables as needed for:

- Partners
- Partner workshop limits
- Workshops
- Workshop dates
- Workshop time slots
- Workshop bookings
- Workshop review status
- Rejection comments/reasons

- Booking statuses
- Workshop reviews and ratings
- Review statuses

Ensure relationships are properly defined:

- A partner can have many workshops, up to their configured workshop limit.
- A workshop belongs to one partner.
- A workshop can have many dates.
- A workshop date can have many time slots.
- A time slot can have many bookings.
- A booking belongs to a workshop, partner, date, and time slot.
- A workshop can have many reviews.
- A review belongs to a user and a workshop.

16. Validation and Security

Implement proper validation for:

- Partner registration fields.
- Workshop creation and editing fields.
- Workshop limit enforcement.
- Workshop dates and time slots.
- Booking capacity.
- User booking details.
- Review and rating submission.
- Admin approval/rejection actions.
- Partner review publish/reject actions.

Ensure authorization rules:

- Only partners can create, edit, or suspend their own workshops.
- Only partners who have not reached their workshop limit can create new workshops.
- Only admins can approve or reject workshops.
- Only admins can update a partner's maximum workshop limit.
- Users can only book approved and available workshops.
- Partners can only manage bookings for their own workshops.
- Only logged-in users can submit workshop ratings and reviews.
- Partners can only publish or reject reviews for their own workshops.

17. Expected Outcome

After implementation:

- Users can register as partners from /partners.

- Partners can create and manage multiple workshops from their dashboard, up to their configured workshop limit.
- The default workshop limit is 3 workshops per partner.
- Admins can update the workshop limit for each partner from their dashboard.
- Admins can review, approve, or reject workshops.
- Approved workshops appear on /experience.
- Users can filter workshops by location, category, price, duration, and language.
- Users can sort workshops by popularity, price, and rating.
- Users can book available workshop slots.
- Partners can confirm or cancel bookings.
- Availability counts update correctly.
- Logged-in users can submit ratings and reviews.
- Reviews stay pending until the workshop partner publishes or rejects them.
- Published reviews are visible publicly and contribute to workshop ratings.
- Partners can view workshop performance metrics.
- Required email notifications are sent at each key workflow step.

18. Partner Profile Page

Each partner should have a public profile page.

The partner profile page should include:

- Partner name.
- Logo or profile image.
- Partner description.
- Contact details, if allowed by the platform.
- Location.
- List of approved workshops from that partner.
- Average partner rating.
- Total reviews.
- Verified partner badge, if applicable.

Example URL structure:

/partners/{partner-slug}

Only approved and active workshops should be shown on the public partner profile page.

19. Partner Verification

Admins should be able to verify trusted partners.

Verification requirements:

- Admins can mark a partner as verified from the admin dashboard.
- Verified partners should display a “Verified Partner” badge.

- The badge should appear on the partner profile page, workshop detail page, and /experience listing page.
- Admins should be able to remove the verified status if needed.

20. Partner Subscription Plans

The system should support partner subscription plans or partner tiers.

Example plan structure:

Plan	Max Workshops	Commission	Main Features
Free	3	Standard	Basic listing and booking management
Pro	10	Lower	More workshop listings and better visibility
Business	Unlimited	Lower	Advanced analytics and promotional tools

For the current implementation, the default maximum workshop limit should remain 3 workshops per partner.

The plan system should be flexible enough to support paid partner plans later.

21. Workshop Detail Page

Each approved workshop should have its own public detail page.

Example URL structure:

/experience/{workshop-slug}

The workshop detail page should include:

- Workshop title.
- Description.
- Image gallery.
- Location and map, if available.
- Category.
- Duration.
- Language.
- Price.
- Difficulty level, if configured.
- Age group, if configured.
- Available dates and time slots.

- Available booking count per slot.
- Partner details.
- Reviews and average rating.
- Booking form.
- Related or similar workshops, if available.

Only approved and active workshops should be accessible publicly.

22. Workshop Image Gallery

Partners should be able to upload multiple images for each workshop.

Image requirements:

- Partners can upload one main image and multiple gallery images.
- Images should be validated for file type, file size, and dimensions.
- Images should be shown on the workshop detail page.
- Images should be reviewed as part of the admin workshop approval workflow.
- Suspended or rejected workshops should not show images publicly.

23. Featured Workshops

Admins should be able to mark selected workshops as featured.

Featured workshops can be displayed:

- At the top of the /experience page.
- On the homepage.
- On category landing pages.
- On location landing pages.

Featured workshop behavior:

- Only approved and active workshops can be featured.
- Admins should be able to enable or disable featured status.
- Featured status can be used as a sorting or display priority signal.

24. Workshop Categories and Tags

Admins should be able to manage workshop categories and tags.

Category examples:

- Art
- Cooking
- Pottery
- Wellness
- Photography

- Adventure
- Local culture

Requirements:

- Each workshop should have at least one category.
- Workshops can have multiple tags.
- Categories should be available as filters on the /experience page.
- Tags can be used for search, discovery, recommendations, and SEO.
- Admins should be able to create, edit, and disable categories and tags.

25. Workshop Difficulty Level

Partners should be able to define the difficulty level of a workshop.

Difficulty options can include:

- Beginner
- Intermediate
- Advanced
- All levels

Difficulty should be shown on the workshop detail page and can be added as a filter on the /experience page in the future.

26. Workshop Age Group

Partners should be able to define the suitable age group for each workshop.

Age group examples:

- Kids
- Teens
- Adults
- Family friendly
- 18+

Age group should be shown on the workshop detail page and can be used as a filter on the /experience page in the future.

27. Cancellation Policy

Partners should be able to define a cancellation policy for each workshop.

Example cancellation rules:

- Free cancellation up to 24 hours before the workshop.
- Partial refund before a defined cutoff time, if payments are implemented.
- No cancellation after a defined cutoff time.

Requirements:

- Cancellation policy should be visible before the user submits a booking.
- Cancellation policy should be visible in booking confirmation emails.
- If online payments are added later, cancellation policy should support refund rules.

28. Guest Booking and Login Booking

The system should support a clear booking mode.

Possible options:

- Guest booking with email verification.
- Logged-in user booking.
- Both guest and logged-in user booking.

Requirements:

- User details should be collected during booking, similar to the current implementation.
- Logged-in users should be able to view booking history from their dashboard.
- Reviews and ratings must require login.
- If guest booking is enabled, guest users should verify their email before receiving sensitive booking management actions.

29. Review Reply from Partner

Partners should be able to reply to published reviews for their own workshops.

Requirements:

- Partner replies should appear below the published user review.
- Partners should only be able to reply to reviews for their own workshops.
- Partner replies should be editable by the partner.
- Admins should be able to moderate partner replies if needed.

30. Admin Review Moderation

Admins should have the ability to moderate workshop reviews.

Review moderation statuses should include:

- Pending
- Published
- Rejected
- Reported
- Hidden

Requirements:

- Partners can publish or reject submitted reviews for their workshops.

- Admins can override review visibility if needed.
- Admins can hide inappropriate or reported reviews.
- Review moderation actions should be recorded in the audit log.

31. Review Reporting

Users and partners should be able to report inappropriate reviews.

Requirements:

- Reported reviews should be flagged for admin review.
- Admins should be able to view all reported reviews.
- Admins should be able to keep, hide, or reject a reported review.
- Reported review actions should be recorded in the audit log.

32. Admin Dashboard Summary

The admin dashboard should include a summary of the full workshop platform.

Admin dashboard metrics should include:

- Total partners.
- Pending partner registrations, if partner approval is required.
- Verified partners.
- Total workshops.
- Pending workshops.
- Approved workshops.
- Rejected workshops.
- Suspended workshops.
- Total bookings.
- Pending bookings.
- Confirmed bookings.
- Cancelled bookings.
- Total reviews.
- Pending reviews.
- Reported reviews.
- Total revenue, if payments are implemented.
- Top performing workshops.
- Top performing partners.

33. Workshop Limit Management

Admins should be able to manage workshop limits for partners.

Requirements:

- The global default workshop limit should be 3 workshops per partner.

- Admins should be able to set a custom limit per partner.
- Admins should be able to mark selected partners as unlimited, if needed.
- Partner dashboard should show the current workshop usage and limit.
- The system should block new workshop creation when the limit is reached.

34. Admin Partner Management

Admins should be able to manage partners from the admin dashboard.

Admins should be able to:

- View all partners.
- View partner registration details.
- Approve or reject partners, if partner approval is required.
- Suspend partners.
- Verify partners.
- Update workshop limits.
- View partner workshops.
- View partner bookings.
- View partner reviews.
- View partner performance metrics.

Suspended partners should not be able to create new workshops or manage active bookings unless specifically allowed by admin rules.

35. Audit Log

The system should record important actions in an audit log.

Audit log events should include:

- Partner registered.
- Partner verified or unverified.
- Partner suspended or reactivated.
- Workshop created.
- Workshop submitted for review.
- Workshop approved.
- Workshop rejected.
- Workshop suspended.
- Workshop edited and resubmitted.
- User submitted a booking.
- Partner confirmed a booking.
- Partner cancelled a booking.
- User submitted a review.
- Partner published or rejected a review.
- Admin moderated a review.

- Review reported.
- Workshop limit updated.

Audit log records should include:

- Action type.
- User who performed the action.
- Related entity, such as partner, workshop, booking, or review.
- Timestamp.
- Optional reason or comment.

36. Keyword Search on Experience Page

The /experience page should include keyword search.

Users should be able to search workshops by:

- Workshop title.
- Workshop description.
- Partner name.
- Location.
- Category.
- Tags.
- Language.

Keyword search should work together with filters and sorting.

Only approved and active workshops should appear in search results.

37. User Dashboard

Logged-in users should have a dashboard for managing their workshop activity.

The user dashboard should include:

- Upcoming bookings.
- Past bookings.
- Cancelled bookings.
- Pending bookings.
- Submitted reviews.
- Published reviews.
- Rejected reviews.
- Favorite or saved workshops, if implemented.
- Receipts or invoices, if payments are implemented.

Users should only be able to access their own booking and review information.

38. Booking Reminders

The system should send booking reminder emails to users.

Example reminder timings:

- 24 hours before the workshop.
- 2 hours before the workshop.

Requirements:

- Reminders should only be sent for confirmed bookings.
- Cancelled bookings should not receive reminders.
- Reminder emails should include workshop name, date, time, location, partner name, and cancellation policy.
- The system should avoid sending duplicate reminders for the same booking.

39. SEO-Friendly Workshop Pages

Workshop detail pages should be SEO-friendly.

Each workshop should support:

- SEO title.
- Meta description.
- SEO-friendly slug.
- Open Graph title.
- Open Graph description.
- Open Graph image.
- Structured data/schema markup for events or local experiences where applicable.

Requirements:

- Only approved and active workshops should be indexable.
- Pending, rejected, suspended, or private workshops should not be indexed.
- Canonical URLs should be added to workshop detail pages.

40. Category Landing Pages

Create SEO-friendly landing pages for workshop categories.

Example URL structure:

/experience/cooking

/experience/art

/experience/pottery

/experience/wellness

Category landing pages should include:

- Category title.
- Category description.
- Approved workshops in that category.
- Filters and sorting where applicable.
- SEO title and meta description.
- Canonical URL.

Only approved and active workshops should appear on category landing pages.

41. Location Landing Pages

Create SEO-friendly landing pages for workshop locations.

Example URL structure:

/experience/colombo

/experience/kandy

/experience/galle

Location landing pages should include:

- Location title.
- Location description.
- Approved workshops in that location.
- Filters and sorting where applicable.
- SEO title and meta description.
- Canonical URL.

Only approved and active workshops should appear on location landing pages.

42. Updated Expected Outcome

After adding these sections, the final system should support:

- Partner registration and partner dashboard access.
- Partner workshop creation, editing, suspension, and performance tracking.
- Admin workshop approval and rejection workflow.
- Configurable workshop limits per partner, with 3 as the current default.
- Public partner profile pages.
- Partner verification and badges.
- Future-ready partner subscription tiers.
- Workshop detail pages with images, ratings, availability, and booking form.
- Featured workshops, categories, tags, difficulty levels, and age groups.
- Experience page filters, sorting, and keyword search.
- Booking creation, partner confirmation, partner cancellation, and booking reminders.
- Availability count updates and overbooking prevention.

- Logged-in user ratings and reviews with partner/admin moderation.
- Partner replies to reviews and review reporting.
- User dashboard for bookings and reviews.
- Admin dashboard for partners, workshops, bookings, reviews, and performance.
- Audit logging for important workflow actions.
- SEO-friendly workshop, category, and location pages.
- Required email notifications for partner, workshop, booking, review, and reminder workflows.
